Common Troubleshooting

The controller was connected the power, but not light up

1.Check the input power supply: please use the power adapter that we equipped or other adapters with the same specification as ours . The input voltage must meet the voltage requirment of the strips lights.

When the input voltage is lower than requirement, the strips lights will not be turn on, while higher voltage may damage the circuit.

The output power of the adapter (KW value) must equals to, or higher than the power of the LED strips lights.

2.Check whether the connector is connected correctly with the strips lights. Make sure each interface is connected correctly

3.Check whether the remote control is open.

If the LED strips light able to light up, but the remote control does not work or can't control LED light.

1.Check whether the insulation sheet is removed from the remote control

2.Make sure the battery on the remote control is installed correctly

3.Ensure that the remote is working.

4.Try to replace the battery.

Attentions:

1.Light strip must be used under DC5V.

2.The light strips are IP65 waterproof and are suitable for indoor and outdoor. But the controller and power supply are not waterproof. So we all recommend hiding them away from water during use.

3.Make sure the surface you are going to paste strip is clean and dry.
